

AMENDMENTS TO THE SPECIFICATION

Before the second paragraph on page 2 (line 6) which begins with "According to an aspect of the present invention there is provided an improved computer system", please insert the following paragraph:

In the present invention, pages are provided in response to a request from a browser received by a server. The server obtains an adapted page, based on a template page, from a display infrastructure. The display infrastructure uses a template page identifier obtained from a resolution component. The resolution component obtains template page identifiers by matching attributes relating to the page request with attributes associated with template page identifiers stored in a database. The template page identifiers are provided based on the best match of the template page attributes and the page request attributes, with default values being used and a defined ranking being used where multiple matched template pages exist.

Before the fifth paragraph on page 7 (line 12) which begins with "DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT", please insert the following paragraph:

Figure 2 is a flow chart illustrating a process for adaptive catalog page display.

Please replace the second paragraph of page 13 (line 7) which begins with "In general terms", with the following paragraph:

As shown in Figure 2, in general terms, the process used by resolution component 26 to determine the correct template page is as follows:
